

The self contained kitchen supply air module

- **Conforms to DW172**
- **Easily fitted to existing kitchens**
- **Single phase operation**
- **Integral Fan and controller**
- **Easily replaced filter media**

It is now essential that kitchens have replacement air introduced to conform to DW172, the specification for kitchen ventilation systems

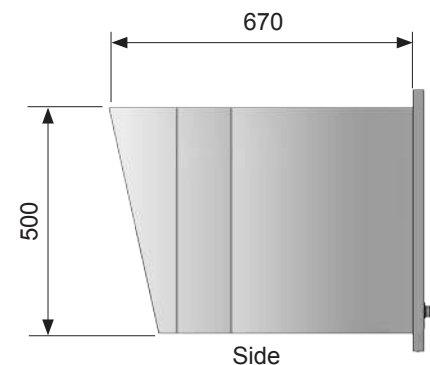

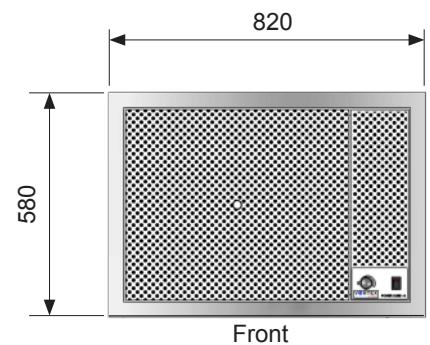

Vortex Pod is a self contained supply air module which is easily retro fitted into existing kitchens with the minimum of expense and disruption.

The unit is complete with integral single phase axial fan unit and fan speed controller to adjust the incoming air volume.

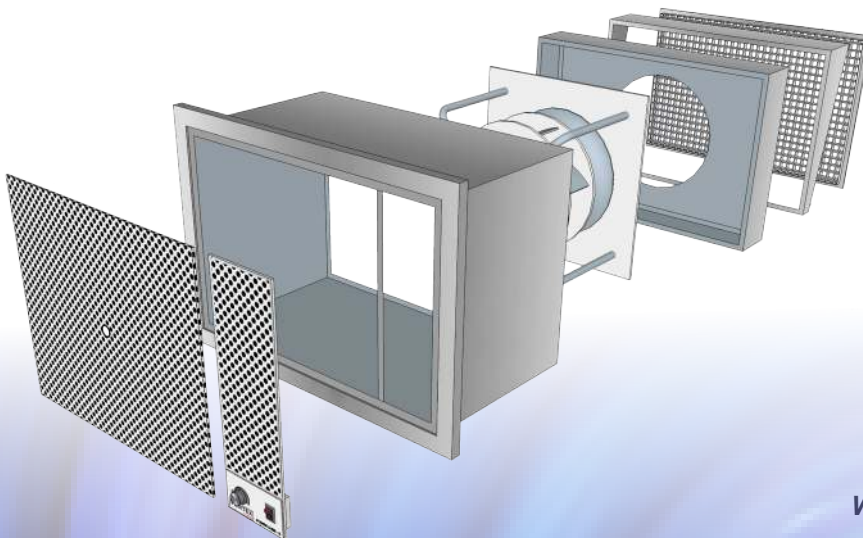

Externally the Pod has an intake weather cowl and egg crate grille. Primary filtration is achieved with an integral filter cartridge, whilst the internal stainless steel diffuser is fitted with an additional stage of easily replaceable disposable filter media.

The *Vortex Pod* is a slimline unit which does not project into the kitchen, therefore taking up minimal space.

Corsair supply the full range of replacement filter packs from stock to keep the unit fully operational.

Each *Vortex Pod* will handle up to 1.2m³/s against a resistance of 150 Pascals and is powered by 240v 13 amp single phase supply.
