

## Case Study

Telegraph Hotel - Coventry

**VORTEX**  
by CORSAIR

The iconic Telegraph building in Coventry's Corporation Street was home to the city's newspaper for more than 50 years.

The building has now been converted into a modern 88 room hotel.

Ventilation in the main kitchen is provided by Corsairs *Vortex Airstream* canopy which incorporates supply air and induction supply to improve performance.

The main canopy has perforated supply diffusers to introduce air back into the kitchen at low velocity, so not creating nuisance draughts.

Running up from the main cookline is a large structural column, so the canopy had to be worked around this and sealed to prevent the ingress of vermin.

Services to the cooking equipment are housed in a services distribution unit to ensure a clean hygienic environment.

The installation also benefits from low energy, recessed LED light fittings and an ANSUL fire suppression system to automatically protect each individual fire risk.

*Welcome to the refreshing world of Corsair*
